

CLINICAL TRIALS

All the **Foltene® clinical trials** have been conducted according to specific experimental protocols (instrumental, clinical and subjective analysis) specially studied for the evaluation of the curative and cosmetic actions of the active principles contained in the **Foltene® Treatments**. In particular, for a proper scientific evaluation which excludes influence factors that can derive from autosuggestion by either the physician or the patient, some of the trials have been carried out in *Double Blind* against *Placebo*.
